CROWNWeb made EASY

Advantage through Technology
What is CROWNWeb?

CROWNWeb is a web-based renal data collection tool which is used by authorized users to electronically submit patient-based data to CMS. CROWNWeb (“Consolidated Renal Operations in a Web Enabled Network”) is being deployed by CMS in order to improve consistency, reduce complexity, and provide secured electronic data collection.

After the full national release, which is scheduled for February 2012, dialysis treatment facilities will be required to submit clinical and administrative data to CMS using CROWNWeb.

How will CROWNWeb effect me?

CROWNWeb data submissions will introduce significant requirements to facilities such as yours. To document compliance with Conditions of Coverage, facilities will need to have an infrastructure in place to collect the required data and to submit this data to CMS using CROWNWeb.

There are 2 options for data submission:

1) The treatment and operating data can be entered manually into the web-based CROWNWeb data entry forms (estimated extra data entry time is 20 minutes per patient per month).

2) An advanced electronic medical record system, such as cyberREN, can compile and submit the data electronically (no extra charting effort / data entry time).

How cyberREN can help

cyberREN is a nephrology specific medical record designed to significantly improve the quality and efficiency of patient care. cyberREN has been used for over 18 years in the USA market.

Early in 2011, the (NRAA) National Renal Administrators Association entered into an agreement with CMS to serve as a clearinghouse for CROWNWeb data submissions. cyberREN will submit CROWNWeb data to the NRAA electronically and is currently involved in a CROWNWeb pilot.

Data required by CROWNWeb will be automatically collected by cyberREN during the normal charting process and will be compiled and reported at months end. The simple creation of a CROWNWeb submission can be carried out by a unit clerk at any time, and will take about 10 min. to complete.

In addition to automating CROWNWeb, by implementing cyberREN at your facility, you can improve patient safety and reduce costs, improve the quality and accuracy of your patient records, cut down on charting time, and go paperless in your operation.

cyberREN
EMR
Features

- **Nephrology Specific, All Modalities**
  (CKD, HD, SNHD, PD, Transplant)
- **Effective & Efficient Dialysis Charting**
  (including home dialysis monitoring)
- **Comprehensive Data Linkage**
  (e.g. dialysis machines, national laboratories, hospital systems, financial systems)
- **Complete Charge Capture / Fully Integrated Billing System**
  (no missed charges, less days receivable)
- **Regulatory Compliance**
  HIPAA compliant
  FDA Approved – 510(k) #K970989

- **Quality Assurance System**
  (basis for QA analysis, management reports)
- **Advanced Reporting**
  (spreadsheet-based)
- **Improved Chart Access**
  (remote workplaces, office & home)
- **Nephrologists Office Practice**
  (scheduling, charting, billing functions)
- **Workflow Improvements / Reduced Workload**
  (reduced manual entry, automated alerts)
- **Lower Management Workload**
  (sophisticated reporting, monthly operating statistics)
